CWE-400: Uncontrolled Resource Consumption

The software does not properly control the allocation and maintenance of a limited resource thereby enabling an actor to influence the amount of resources consumed, eventually leading to the exhaustion of available resources.

com.thoughtworks.go.server.domain.ServerMaintenanceMode.updatedOn() may expose internal representation by returning ServerMaintenanceMode.updatedOn

Returning a reference to a mutable object value stored in one of the object's fields exposes the internal representation of the object. If instances are accessed by untrusted code, and unchecked changes to the mutable object would compromise security or other important properties, you will need to do something different. Returning a new copy of the object is better approach in many situations.
