11	com/thoughtworks/go/ config/BackupConfig.java	74	2	STYLE	SEC_SIDE_EFFECT_CONSTRUCTOR	ⓘ ♡

CWE-233 Improper Handling of Parameters

Error information:
com.thoughtworks.go.config.Authorization$PresentationElement defines compareTo(Authorization$PresentationElement) and uses Object.equals()

validateTimer method in
BackupConfig.java[https://github.com/gocd/gocd/blob/master/config/config-api/src/main/java/com/thoughtworks/go/config/BackupConfig.java
] creates an object but does not assign this object to any variable or field. This implies that the class operates through side effects in the constructor, which is a pattern to use, as it adds unnecessary coupling. Consider pulling the side effect out of the constructor, into a separate method, or into the calling method.
